Transmission Lines**Cost**

\$2,034,969 (Phase III-D)

Molzen Corbin provided complete electrical design for new Booster Stations # 4A and #5A at the new Buckman Water Treatment Plant. The booster stations are housed in a single structure and consist of a combined 800HP of booster pumps powered by a 3,200A switchboard and feed from a redundant set of 2MVA service transformers.

Scope of Work

Water, Grants/Funding, Construction Observation/Administration
