

# Bosque Farms Wastewater Collection System

## Client

Bosque Farms

## Completion

1999 (Phase I)  
2002 (Phase II)

## Size

47,400 LF Sewer Line  
500,000 GPD

## Cost

\$4,083,460

The Village of Bosque Farms is a rural community located approximately 15 miles south of Albuquerque, New Mexico. Wastewater in the community had historically been treated using on-site systems. To address concerns about ground water contamination from these on-site systems, Molzen Corbin was selected to prepare a wastewater facilities plan to determine the most appropriate alternative to address the potential threat to the drinking water in the area. The recommended alternative was to construct a centralized wastewater treatment plant and low pressure sewers to collect and convey the wastewater to the plant. The entire collection system was constructed in 13 phases over seven years.

## Scope of Work

Water Resources Engineering, Electrical Engineering, Grants/Funding, Architectural, Construction Observation/Administration
