

# Carlsbad Sheep Draw Well 6

**Client**

City of Carlsbad

**Completion**

2016

**Size**

2,400 GPM

**Cost**

\$1,149,414

Molzen Corbin provided complete electrical design for new Booster Stations # 4A and #5A at the new Buckman Water Treatment Plant. The booster stations are housed in a single structure and consist of a combined 800HP of booster pumps powered by a 3,200A switchboard and feed from a redundant set of 2MVA service transformers.

**Scope of Work**

Water, Grants/Funding, Construction Observation/Administration
