

Tijeras Well No. 3

Client

Village of Tijeras

Completion

Under Construction

Size

90 GPM

Cost

Under Construction

The Village of Tijeras supplies water to its residents with two groundwater wells. In the past few years, Well No 1 has been losing capacity and is not expected to remain a viable source of supply for much longer. The Molzen Corbin Team designed and oversaw drilling and installation of a new water well to secure the future water supply for the Village. The completed well can produce high-quality water at a sustainable rate of 90 gallons per minute and is expected to provide decades of reliable water for potable and fire-fighting purposes. Molzen Corbin designed the pumping and disinfection facilities, a well house, and controls to allow the well to fill either of the Village's two tanks.

Scope of Work

Water, Grants/Funding, Construction Observation/Administration
