

# US 285 Corridor

**Client**  
NMDOT

**Completion**  
2020

**Size**  
22 Miles

**Cost**  
\$6,568,223 (Est.)

Molzen Corbin completed the study and design of a 22-mile stretch of US 285 from the Texas State line through Loving. Located in the heart of Southeastern New Mexico, this corridor has significant truck traffic accounting for over 60% of the vehicles on the roadway. Molzen Corbin completed an extensive analysis of the corridor that included recommended alternatives specific to each segment. Molzen Corbin used state-of-the-art technology and sound engineering to resolve several complex challenges, including mitigating sinkholes, analyzing drainage along the entire corridor, phasing construction, and assisting with the preparation and submittal of grant applications.

## Scope of Work

Roadway Design, Drainage Engineering
